Growing Guide

Water, light, and nutrients are essential for a plant to grow. To have a successful experience with your hydroponic garden kit and soil garden kit, please follow these instructions.

Watering

- Follow the steps in the operation manual for each kind of kit to water your plants.

Light

- Light is essential for a plant to grow. If you have access to a windowsill, put the kit on a windowsill to get sunlight. Otherwise, you can place the kit under LED plant-growing lights for 16 hours a day as a substitute for sunlight.

Nutrients

- Hydroponic garden kit: plant food is not included in the hydroponic kit due to regulations. Recommend liquid plant food for plants available on Amazon or local stores. Follow instructions on plant food packaging to fertilize your hydroponic kit.

Soil garden Kit: the compressed coco coir soil wafers are rich with nutrients that can supply plants for 2 to 3 months. Only need to add fertilizer after then.

Hydroponic Mason Jar Kit

1. Take lid and ring securing lid in place off of the mason jar.
2. Take the net pot with soil plug inside out of the jar.
3. Fill the empty mason jar with 16 oz of water or up to the line marked on the side of the jar under paper sleeve.
4. Put the net pot with plug back in.
5. Secure the ring back into place without the lid.

Leave the circle plug cover on the growth plug for up to 7 days or until the seeds germinate.

6. Watch your hydroponic plant grow!
7. (Follow steps 1-3 to refill water when water drops below $\frac{1}{3}$ of the jar).

Hydroponic Flower Kit

1. Remove the lid and the white net pot (with wick and plug) from the vase.
2. Add water to $\frac{2}{3}$ of the vase.
3. Place the net pot (with wick and plug) back to the vase.
4. Leave the green circle plug cover on the plug for up to 7 days or until the seeds germinate.
5. Watch your hydroponic plant grow!
6. (Follow steps 1-2 to refill water when water drops below $\frac{1}{3}$ of the vase).

Mason Jar Soil Kit

Preparing the soil

1. Place the 3 soil disks into a separate container (not included).
2. Add 3 cups of water to the container with the disks.
3. Wait for disks to expand.
4. Stir to aerate.

Preparing the jar

1. Transfer the soil into the mason jar (do not press the soil down).
2. Set aside one spoonful of soil for covering the seeds.

Planting

1. Open the seed envelope.
2. Sprinkle the seeds over the top of the soil.
3. Cover with the soil you set aside (Refer to the instruction on the seed envelope for exact planting depth).

Coco Pot Kit

Preparing the soil

1. Place the 5 soil disks into a separate large container (not included).
2. Add 5 cups of water to the container with the disks.
3. Wait for disks to expand.
4. Stir to aerate.

Preparing the pots

1. Distribute the soil evenly among the 5 pots (do not press the soil down).
2. Set aside 5 spoonfuls of soil for covering the seeds.

Planting

1. Open the seed envelope.
2. Sprinkle the seeds over the top of the soil.
3. Take one spoonful of the soil set aside and cover the seeds (do not press down).
4. Write the name of the seed planted on the popsicle stick.
5. Insert a popsicle stick in the soil to label.
6. Repeat with each pot.

Self-watering Pot Kit

Preparing the net pots

1. Loop a string through the two larger holes on the bottom of a black net pot (one end through each hole, so the two ends are sticking out of the bottom of the net pot).

2. Repeat with rest of the strings and net pots.

Preparing the soil

1. Place the soil disks into a separate large container (not included).
2. Add 1 cup of water per disk to the container.
3. Wait for disks to expand.
4. Stir to aerate.
5. Distribute the soil evenly among the 3 pots (do not press the soil down).
6. Set aside 3 spoonfuls of soil for covering the seeds.

Planting

1. Open the seed envelope.
2. Sprinkle seeds from one packet into one pot.
3. Cover the seeds with one spoonful of soil.
4. Pour one inch of water into the larger white pot.
5. Place the black net pot with strings back into the larger white pot.
6. Place the sticker with the corresponding plant name onto the pot.
7. Repeat with each pot.

Self-watering Basin Kit

Preparing the soil

1. Place the 12 soil disks into a separate large container (not included.)
2. Add 12 cups of water to the container.
3. Wait for disks to expand.
4. Stir to aerate.
5. Transfer soil into the black tray (do not press the soil down).
6. Set aside half a cup of soil for covering the seeds.

Planting

1. Draw 3 lines in the soil to indicate 4 separate sections.
2. Open one seed packet.
3. Sprinkle the seeds across one section.
4. Write the plant name onto one of the markers.
5. Insert the marker into the section with the seeds.

6. Repeat steps 2-5 for each of the sections.
7. Once the sections are all sprinkled with seeds, cover the seeds with the soil you set aside.

Watering

1. Fill the white basin with water by pouring water through the netted opening in the corner of the black tray. Fill until the max line.
2. Repeat when water reaches minimum line.
3. Watch your self-watering plants grow!
